

LEGION®

Panel System

CONNECTING IDEAS

Legion's appearance is like no other panel system, because it was designed like no other—from the outside in. The result is a slim European profile with a 3.5" panel thickness that integrates with architectural wall systems and balances openness with user privacy.

Glass and open space contribute to Legion's aesthetic and bring the outdoor environment in. Frameless glass divider screens and glass tiles provide a visual boundary while admitting natural light. Elevated-base panels and open support legs improve air circulation.

Options that enhance privacy also facilitate tasks that require deeper concentration or focus. Fabric panels provide acoustic dampening and limit visual distractions. Full-frame and rolling doors help indicate when you would prefer not be disturbed.

Legion integrates seamlessly with Vini®, Venus®, and Universal™ overhead cabinets to maximize storage space. Vini cabinets feature a sliding door design that echoes Legion's openness and can be specified with a worksurface-supporting leg for undersurface applications.

Perforated insert legs coordinate with perforated tiles for a uniform look.

Overhead or underhead storage is provided by Vini sliding-door cabinets.

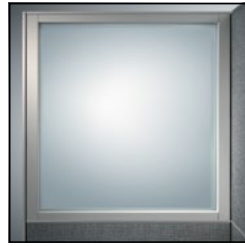

Raised panel legs improve air circulation and encourage tidiness in the workspace.

Glass dividers let in natural light while defining spaces.

The Legion grommet allows cables to pass through the worksurface neatly.

Glass tiles provide an airy feeling while creating visual boundaries.

Fabric tiles offer privacy and acoustic dampening to improve concentration.

Steel markerboard tiles are compatible with both magnets and markers.

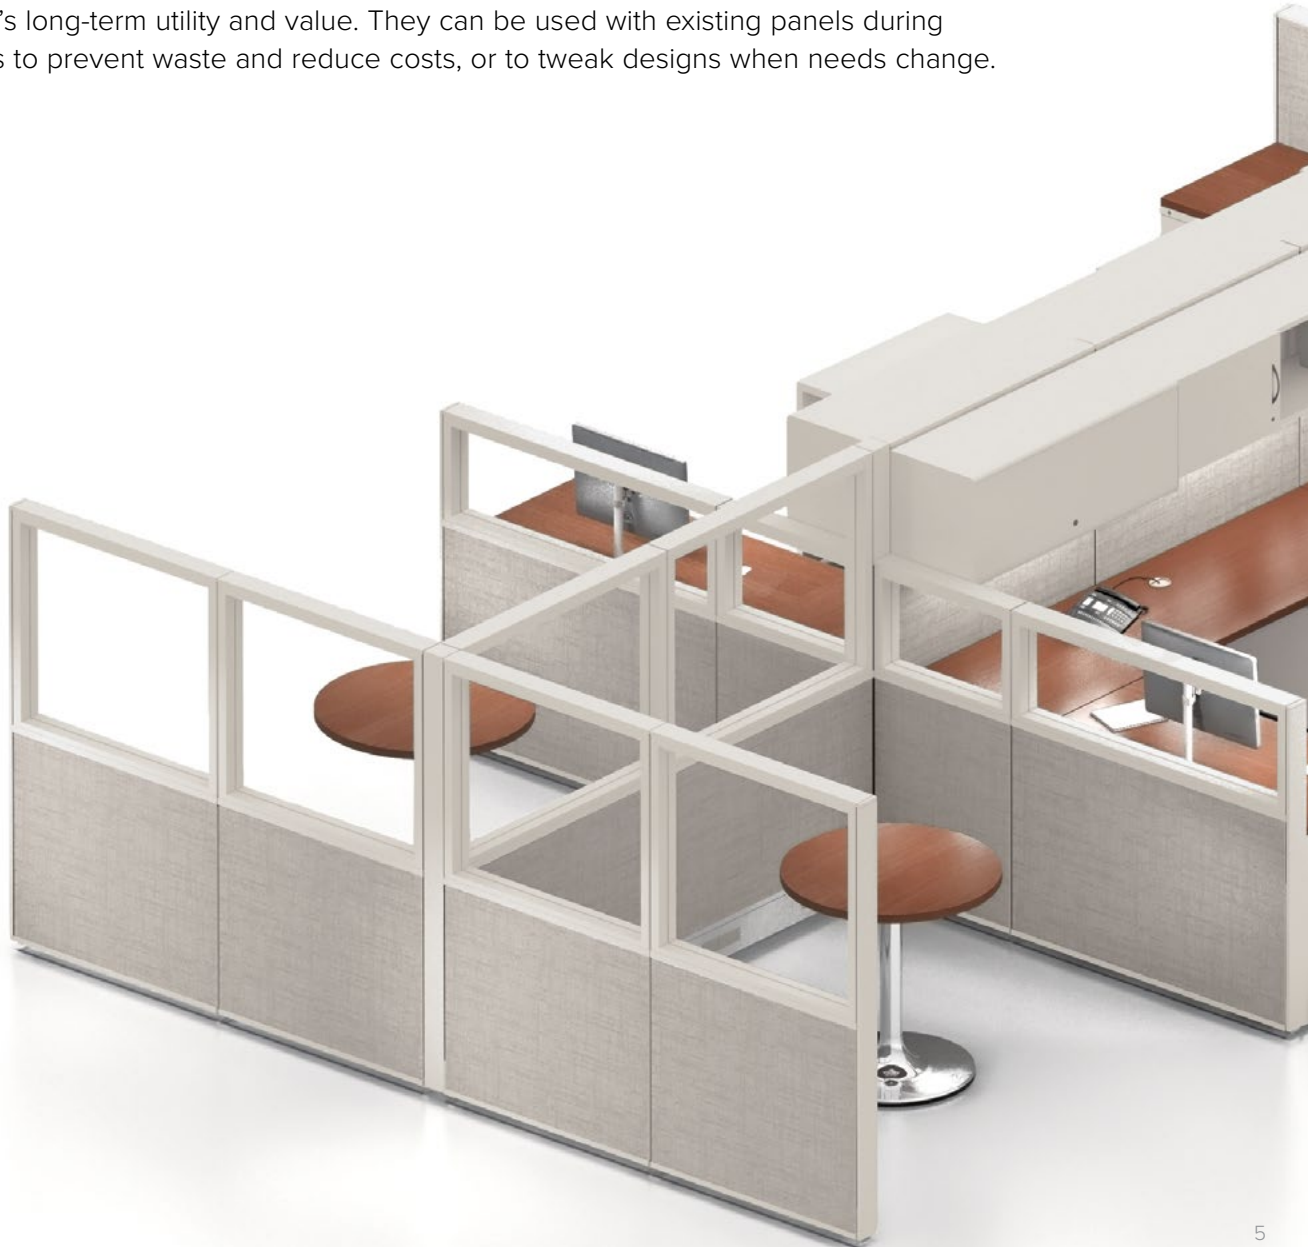

COLLABORATING SPACES

Storage space is even more precious in shared workstations. A variety of compatible Vini® and Series XXI® products provide customizable solutions in a compact footprint. Options include freestanding pedestal files, lateral files, bookcases, storage towers and kiosks as well as worksurface-supporting pedestals and Vini cabinets.

Files and supplies aren't the only sources of visual clutter in a station; cords and cables also play a role. Legion offers power above the worksurface as well as at the base and worksurface grommets to simplify cable management throughout.

Communication is vital for collaboration. Legion's tile offerings help colleagues communicate without disrupting their officemates. Steel markerboards help put everyone on the same page. Tackboards keep high-priority items front and center. Tempered glass tiles allow coworkers to remain in visual contact, and fabric panels with acoustic septa reduce ambient noise to create privacy for workgroups.

Segmented panels allow tiles to be used in combination for additional design flexibility, allowing clients to balance their privacy, efficiency, and communication needs at will. Stacking panels also improve Legion's long-term utility and value. They can be used with existing panels during reconfigurations to prevent waste and reduce costs, or to tweak designs when needs change.

INTERACTION BY DESIGN

Benching designs have found new life outside the lab in environments that prize efficiency. With Legion a single panel run topped by glass divider screens can be used to separate banks of users from one another. Adding standard raceway bases allows electrical receptacles and data jacks to be placed on both sides to serve all users.

In addition to the raceway base, panels can be specified with an elevated or tile-to-floor base. Elevated bases replace the raceway with a 6" opening. Tile-to-floor bases are upholstered from top to bottom on one side, but contain a standard raceway on the other. All raceways can be specified with or without data and electrical knockouts.

Legion also offers worksurface supports to suit any style. Post legs contribute to a minimalist aesthetic. Open legs mimic the design of Legion freestanding tables, and legs with perforated inserts provide modesty while maintaining airflow. But legs aren't the only option; worksurface-supporting pedestal files and Vini underhead cabinets provide support with a storage bonus.

Like its namesake military force, the Legion panel system's strength is its adaptability. When freestanding tables are used in place of worksurfaces, Legion can be used to delineate workstations with adjustable-height surfaces or combinations of sit/stand deskings. A freestanding stabilizer foot expands the design possibilities in these applications.

The Legion panel system gives you a diverse group of specialized components ready for the field. You just need to decide where you want them to take you first.

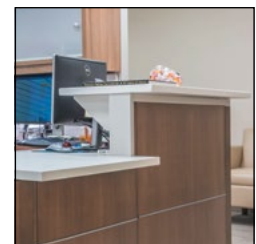

The open leg makes a bold visual statement in a minimal footprint when supporting a worksurface.

Panel wrapped tables give users the best of both worlds—privacy and height-adjustable surfaces.

The freestanding table translates the line's open leg and slim profile into an eye-catching centerpiece.

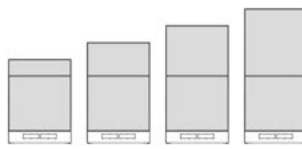

Reception applications include transaction counters with concealed storage.

STATEMENT OF LINE

PANELS

Preconfigured Monolithic Panels
Monolithic panel widths: 24, 30, 36, 42, 48, 54, 60, 72
Monolithic panel heights: 32, 40, 48, 56, 64

Preconfigured Segmented Panels
Segmented panel widths: 24, 30, 36, 42, 48, 54, 60, 72
Segmented panel heights: 32, 40, 48, 56, 64

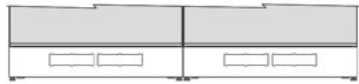

Rolling Door
Rolling Door widths: 36, 42
Rolling Door heights: 64, 80

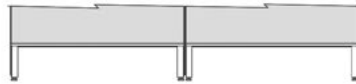

Preconfigured Stacker
Stacker widths: 24, 30, 36, 42, 48, 54, 60, 72
Stacker height: 16
