Navigator®

Task Chair

Seat and Backrest

Seats and backrests are molded compound curved polypropylene with a textured finish. Upholstered seat is two-piece construction. Poly seat is one-piece construction. Upholstered chairs have partially exposed polypropylene surfaces. Fabric is upholstered over $\frac{3}{16}$ " foam on the backrest and $\frac{1}{2}$ " foam on the seat.

Backrest Supports

Two die cast aluminum backrest supports attach the backrest to the Navigator mechanism. A steel tube is cast into each backrest support for added strength.

Navigator Mechanism

The back flex is achieved by the Navigator mechanism. It consists of two flat Navigator springs captured at both ends by bushings which in turn engage with the backrest supports. The Navigator mechanism creates gradually increasing resistance over the full 12° of back flex.

Pedestal Base

24" injection molded glass reinforced nylon 5-blade base.

Pedestal Armrests

A tubular steel frame supports self-skinning urethane armrests. The support is bolted to the seat underside and powder coated to match other hard surface elements. Arms are field installable.

Pedestal Casters

Double wheels of high-impact thermoplastic. High-impact plastic frame matches chair color.
